

UCSF Center for Reproductive Health *In vitro* Fertilization Success Rates in 2003

Patient Age	≤34	35-37	38-40	41-42	≥43	Anonymous Ovum Donor	Known Ovum Donor
Number of Cycles Started	116	108	134	64	32	46	8
Number of Cycles with Embryo Transfer (ET)	101	96	106	54	20	45	8
Percentage of cycles resulting Clinical Pregnancy	55.2%	42.6%	38.1%	23.4%	12.5%	69.6%	5 / 8
Percentage of cycles resulting Live Birth	48.3%	36.1%	29.9%	14.1%	6.3%	63.0%	4 / 8
Percentage of ET resulting Clinical Pregnancy	63.4%	47.9%	48.1%	27.8%	20.0%	71.1%	5 / 8
Percentage of ET resulting Live Birth	55.4%	40.6%	37.7%	16.7%	10.0%	64.4%	4 / 8
Average Number of Embryos Transferred	2.7	3.1	3.6	4.1	3.7	2.4	3.1

UCSF Center for Reproductive Health *In vitro* Fertilization Success Rates in 2004

Patient Age	≤34	35-37	38-40	41-42	≥43	Anonymous Ovum Donor	Known Ovum Donor
Number of Cycles Started	116	135	94	85	28	59	16
Number of Cycles with Embryo Transfer (ET)	97	118	79	74	22	55	14
Percentage of cycles resulting Clinical Pregnancy	48.3%	43.7%	46.8%	23.5%	10.7%	66.1%	37.5%
Percentage of cycles resulting Live Birth/Ongoing	40.5%	39.3%	38.3%	18.8%	10.7%	57.6%	37.5%
Percentage of ET resulting Clinical Pregnancy	57.7%	50.0%	55.7%	27.0%	13.6%	70.9%	42.9%
Percentage of ET resulting Live Birth/Ongoing	48.5%	44.9%	45.6%	21.6%	13.6%	61.8%	42.9%
Average Number of Embryos Transferred	2.7	3.3	3.4	4.0	3.8	2.2	3.2

Note:

Clinical Pregnancy is defined by the presence of a gestational sac using vaginal ultrasound five to six weeks after embryo transfer.

Live Birth is counted as each pregnancy, for example, a live birth with twins is counted as one pregnancy.

Ongoing pregnancy includes the pregnancies progressed beyond 20 weeks. Since not all the pregnancies from 2004 are delivered, ongoing pregnancies and live birth are combined.
